

Real-Time Detection of Security and Safety Incidents, Enabling Protection of Assets & Effective Threat Response

Challenges

Security Threats
Keeping intruders out while allowing continuous operations

Asset Protection
Protecting valuable equipment and personnel

After-hours Site Protection
Safeguarding sites 24/7

Agent Vi's centrally managed video analytics solutions detect and alert to a wide range of security breaches in real-time, allowing serious situations to be handled effectively as they unfold, and enabling operations to continue smoothly and continuously. User-defined schedules enable site protection after-hours and on weekends, with no need to increase manpower.

Real-Time Event Detection Instantaneous alerts generated for:

- Perimeter intrusion
- Approach zones
- Unauthorized access (according to user-defined scheduling)
- Asset removal
- Additional security breaches

Industry-leading solutions that meet customer needs

- Centralized management over multiple sites
- Flexible, unrestricted analytics combinations
- Full redundancy and high availability
- High Probability of Detection (POD)
- Low False Alarm Rate (FAR)
- Highly suited to large-scale deployments
- Scalable and cost-effective
- Simple to install, configure and calibrate
- Superior results in complex environments

Customer Story: KDL Trans, Belgium

KDL Trans, a globally-oriented logistics provider, sought a solution for early detection of unauthorized people in their facility. Additionally, KDL Trans wanted to reduce guard costs after-hours and on weekends, when the site was less busy. Deployed on thermal cameras, Agent Vi's real-time event detection capabilities enable early detection of intruders, which in turn, allows for a more effective response by security guards.

"We are very happy with Agent Vi's real-time video analytics solution. The seamless integration with our thermal cameras offers excellent detection rates at all times of day, and in all lighting conditions. Furthermore, the real-time alerts generated and sent to the monitoring station have allowed us to decrease the number of security guards stationed around the perimeter, effectively cutting our costs without lowering our level of security."

- Jurgen De Laet, Operations Manager, KDL Trans

About Agent Video Intelligence

Agent Video Intelligence (Agent Vi™) offers on-premise and cloud-based video analytics solutions for multiple intelligent video applications. The company's market-leading technological position is based on patented software architecture for distributed image processing, advanced computer vision algorithms, and expertise in software development – the right fit for surveillance deployments of any size.
